-	Microsoft Silverlight (KB4481252)	Silverlight
-	Update for Microsoft Silverlight (KB4481252)	Silverlight

## Fast, safe, and seamless patching.

Deploying updates or patches can make or break productivity, not just for the IT support team, but for your entire organization. If you manage many workstations and servers, patch management can quickly get very complex and possibly expose your system to sluggish performance and serious security risks.

N-able N-sight™ RMM streamlines patch management by giving you granular control over your patching policies through a single, user-friendly console. Automate the entire process or customize patch policies for certain devices.

## More control from a single console

- **Easy-to-use console:** complete patch management in one, user-friendly interface
- **Automation:** auto-approve patches for specific programs based on severity levels
- **Scheduling:** set patching windows to update software without disrupting employees during times of high productivity
- **Customizable policies:** apply custom settings to individual devices as needed

## Update and protect more software

- **Patches for most business software:** over 80 application families, including Apple®, Google®, Java®, Adobe®, Skype®, and zip tools
- **Support for Microsoft products:** continuous updates for Microsoft Windows®, Exchange™, and Microsoft 365®
- **Support for macOS® devices:** we test and validate patches from Apple and 200+ other vendors before releasing them
- **Extra security for commonly exploited programs:** the latest security patches for vulnerable programs such as Adobe and Java

### Benefit from additional features

- **Streamlined patch approvals:** approve patches in batch across sites, networks, servers, and workstations
- **Patch rollback:** easily revoke Microsoft patches on one or more devices at a time to limit the impact of a bad patch
- **Automated pushes for disabled devices:** never miss an update for any devices that might be disabled during a standard patch management window
- **Deep scans to find new vulnerabilities:** use deep scans to uncover new sources of risk or inefficiency in your network

### Patches for popular software

Including, but not limited to:

- Microsoft 365, Exchange, SQLServer®, Internet Explorer® and Windows OS, Java, Adobe, Mozilla®, Firefox®, Google Chrome™, Apple iTunes®, and Apple QuickTime®

## About Lapis IT BV

Lapis IT BV is a Managed Service Provider partner of N-able. We provide support to customers whom are aware of the cost and damage of downtime, data recovery, data loss or reputation damage.
